

Update Your Personal Order Preference Lists

Alaris Pump Interoperability with Epic for IV Infusions

EPIC SYSTEM UPDATE

Overview of Feature / Changes

Upstate will implement an upgrade to **Alaris Pumps to include interoperability with Epic**; the go-live for this project is scheduled for next **Tuesday December 17, 2019 at the Downtown Campus and Wednesday December 18, 2019 at the Community Campus**. As part of this project, **approximately 1,000 medication records were updated in October 2019**; order defaults and required fields may have changed.

What You Need to Know

If any of these medication records were added to your personal order preference lists before changes in October 2019, the medication record will not have the necessary elements for successful interoperability with the Alaris Pumps.

In the afternoon on **Thursday December 12, 2019**, IMT will **remove all affected medication records from personal order preference lists**.

What You Can Do

Search for the medication orders in the system and re-add them to your personal preference lists as needed. For tips on how to add an order to your preference list, please review this [Tip Sheet](#).
