

EPIC SYSTEM UPDATE

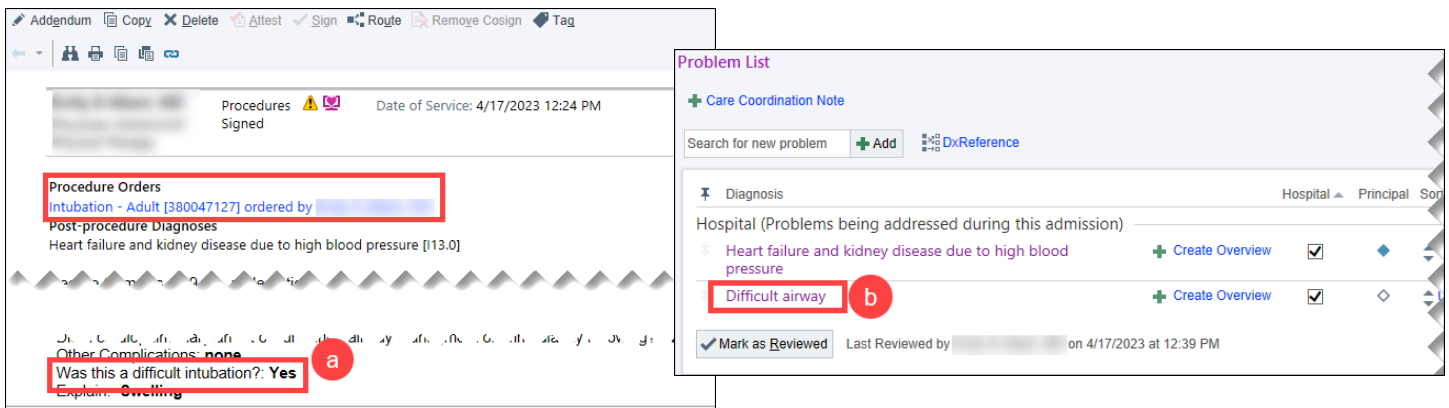

Overview of Feature / Changes

Effective April 24, 2023: To help improve the management of those patients with a difficult airway, there have been updates made to the **Difficult Airway FYI Flag**.

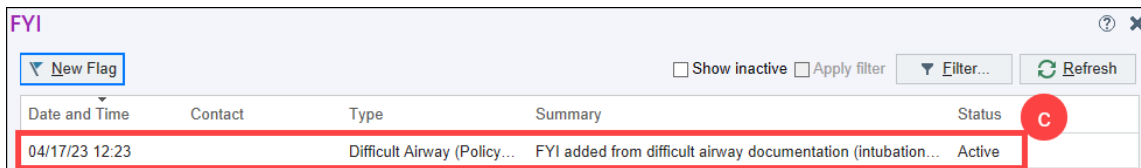

Adding the Difficult Airway FYI Flag

The Difficult Airway will auto-populate on the Storyboard when **one of the following** is documented in the patient's chart:

- An **Intubation Procedure Note** indicates a **Patient had a Difficult Intubation**.
- The Problem List includes **Difficult Airway**.
- A new **Difficult Airway FYI Flag** is added.

The screenshot shows two overlapping windows from the EPIC system. The left window displays 'Procedure Orders' with a red box around 'Intubation - Adult [380047127] ordered by' and another red box around 'Was this a difficult intubation?: Yes' with a red circle 'a' next to it. The right window shows the 'Problem List' with a red box around 'Difficult airway' and a red circle 'b' next to it.

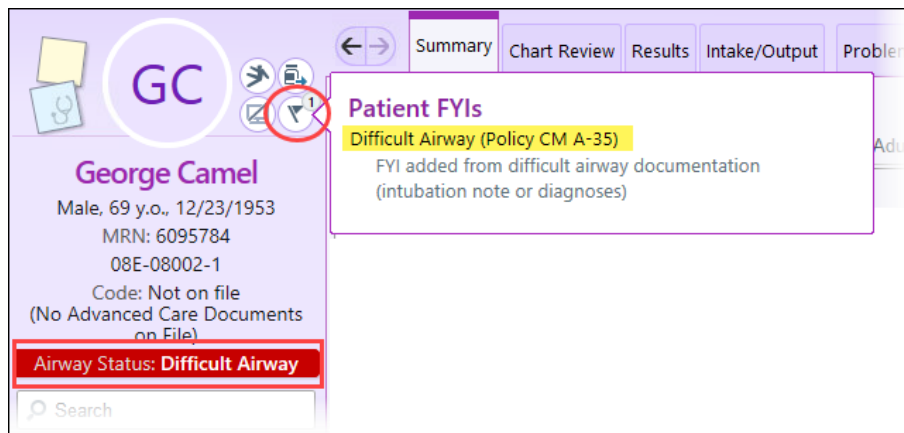

The screenshot shows the 'FYI' (Flag Your Item) list in EPIC. A table lists flags with columns for Date and Time, Contact, Type, Summary, and Status. A red box highlights a row with the following data:

Date and Time	Contact	Type	Summary	Status
04/17/23 12:23		Difficult Airway (Policy...	FYI added from difficult airway documentation (intubation...	Active

Difficult Airway FYI Flag

The **Difficult Airway FYI Flag** will populate as an **FYI Flag icon** and its **own line** on all clinical Storyboards.

The screenshot shows a patient storyboard for George Camel. A red circle highlights the FYI flag icon in the top navigation bar. A red box highlights the 'Airway Status: Difficult Airway' at the bottom. A callout box titled 'Patient FYIs' shows the details of the flag: 'Difficult Airway (Policy CM A-35)' and 'FYI added from difficult airway documentation (intubation note or diagnoses)'.
