Oxiris Barbot, MD
Commissioner

NEW YORK CITY POISON CONTROL CENTER

Consultants' Conference is a monthly meeting attended by medical toxicologists, emergency physicians, pharmacists and other learners from all over the Northeast. It is an educational activity in which the *Consultants* (renowned experts in various medical specialties) provide insight into the analysis and approach to the diagnosis and treatment of interesting toxicologic cases. The cases are presented mostly by the NYU Toxicology fellows in training but anyone can present their case if deemed appropriate. Learners of all levels are able to benefit from the rich and often dynamic discourse.

The next Consultants' Conference will be held this week on Thursday, **December 5, 2019 starting at 2:00 PM and ending at 4:00 PM** in the Public Health Laboratories auditorium. The location of PHL is 455 First Avenue, at 27th Street and 1st Avenue in Manhattan.

1. A 6-year-old boy with no significant past medical history presents to the ED with multiple episodes of blue-green vomiting after an ingestion of a powder he thought was candy. On presentation, he complains of nausea and some mild abdominal discomfort. His presenting vitals are: BP, 101/63 mm Hg; HR, 120 beats/minute; RR, 26 breaths/minute; T, 36.9°C, O₂ Sat, 98% (RA), Wt, 21kg.
2. A 68-year-old man with a past medical history of obstructive sleep apnea, HTN, COPD and recent hospitalization for suicidal ideation is found unconscious next to his running CPAP machine by his roommate. The roommate reports hearing the sound of the patient falling to the ground and calling 911. The patient's initial vital signs in the ED are: BP, 137/80 mm Hg; HR, 111 beats/minute; RR, 15 breaths/minute; T, 99.8°F; O₂ Sat, 94%: POC glucose, 138 mg/dL.
3. A 60-year-old man with ESRD and CNS lymphoma is intubated and treated for non-convulsive status epilepticus. Ten days after stopping sedation, he remains somnolent and ventilator-dependent with no further evidence of seizure activity on EEG. His vital signs are: BP: 90/73 mm Hg; HR, 99 beats/minute; RR, ventilated 26 breaths/minute (set rate 16); T, 98°F; O₂ Sat, 98%; POC Glu, 103 mg/dL.

Mark K. Su, MD, MPH
Director, New York City Poison Control Center
