

**New York City Poison Control Center (NYC PCC) Consultants' Conference
December 2, 2021**

Consultants' Conference is a monthly meeting attended by medical toxicologists, emergency physicians, pharmacists and other learners from all over the Northeast. It is an educational activity in which the *Consultants* (renowned experts in various medical specialties) provide insight into the analysis and approach to the diagnosis and treatment of interesting toxicologic cases. The cases are presented mostly by the NYU Toxicology fellows in training, but anyone can present their case if deemed appropriate. Learners of all levels can benefit from the rich and often dynamic discourse.

The next NYC PCC Grand Rounds and Consultants' Conference will be held on Thursday December 2, 2021. Grand Rounds will start at 1PM EST and Consultants' Conference will follow immediately. The topic and speaker will be:

**A medical toxicologist in Ghana:
Reflections on a decade of observation and practice**

**Samara Soghoian, BSc, MA, MD
Associate Professor of Emergency Medicine
The Ronald O. Perelman Department of Emergency Medicine
Division of Medical Toxicology
New York University Grossman School of Medicine**

Consultants' Conference will take place from 2 PM - 4 PM EST.

We will be broadcasting both the Grand Rounds lecture and Consultants' Conference via the same link on WebEx and there WILL NOT be a live conference at the Public Health Laboratory. Please click [HERE](#) to register and download the WebEx outlook file.

Please Note: If you would like to receive this monthly announcement on a regular basis, please register for the conference at the link above, even if you are unable to attend.

**Please post and distribute.
All are welcome.**

Cases to be discussed for Consultants' Conference include:

1. A 22-year-old pregnant woman, G2 P1001, at 38 weeks and 5 days gestation, presents to the hospital because of an outpatient venous blood lead concentration of 53 μ g/dL. She has a past medical history of iron deficiency anemia. She is asymptomatic and her vital signs are all within normal limits.
2. Three siblings (ages: 15 months old, 4 years old and 7 years old) are brought to the ED by their mother because of a concern for "antifreeze" ingestion three hours ago. The children are all asymptomatic and all have vital signs that are within normal limits.
3. A 75-year-old woman with a past medical history of hypertension, hyperlipidemia, chronic kidney disease, atrial fibrillation, congestive heart failure and dementia presents to the ED for decreased oral intake and progressive deterioration in mental status. Her initial vital signs are: BP, 133/83 mm Hg; HR, 105 beats/min; RR, 20 breaths/min; T, 37 degrees Celsius; O₂ Sat, 97% (RA). Her initial ECG is interpreted as "atrial fibrillation with a heart rate of 100 beats/min."

Mark K. Su, MD, MPH
Director, New York City Poison Control Center

Jointly Provided by the NYU Grossman School of Medicine and the Poison Control Center.

Accreditation Statement

This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education through the joint providership of the NYU School of Medicine and the Poison Control Center. The NYU Grossman School of Medicine is accredited by the ACCME to provide continuing medical education for physicians.

Credit Designation Statement

The NYU Grossman School of Medicine designates both of these as live activities for a maximum of 0.75 *AMA PRA Category 1 CreditsTM* for Toxicology Grand Rounds and 2 *AMA PRA Category 1 CreditsTM* for Consultants' Conference. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Disclosure Statement

The NYU Grossman School of Medicine adheres to ACCME accreditation requirements and policies, including the Standards for Commercial Support regarding industry support of continuing medical education. In order to resolve any identified Conflicts of Interest, disclosure information is provided during the planning process to ensure resolution of any identified conflicts. Disclosure of faculty and commercial relationships as well as the discussion of unlabeled or unapproved use of any drug, device or procedure by the faculty will be fully noted at the meeting.
