

New York City Poison Center (NYC PC) Consultants' Conference

Consultants' Conference is a monthly meeting attended by medical toxicologists, emergency physicians, pharmacists and other learners from all over the Northeast. It is an educational activity in which the *Consultants* (renowned experts in various medical specialties) provide insight into the analysis and approach to the diagnosis and treatment of interesting toxicologic cases. The cases are presented mostly by the NYU Toxicology fellows in training, but anyone can present their case if deemed appropriate. Learners of all levels can benefit from the rich and often dynamic discourse.

The next NYC PCC Grand Rounds and Consultants' Conference will be held on January 5, 2023. Grand Rounds will start at 1PM EST and Consultants' Conference will follow immediately. The topic and speaker will be:

The Poison of Social Injustice in Medical Toxicology: Access, Environment & Racism

Daniel M. Lugassy, MD
Assistant Professor
Department of Emergency Medicine
Division of Medical Toxicology
Medical Director, Simulation Center at Elmhurst
NYC H+H Elmhurst Hospital
Ichan School of Medicine at Mount Sinai

Consultants' Conference will take place from 2 PM - 4 PM EST.

The live conference will be held in the Public Health Laboratory and we will also broadcast via WebEx. Please click [here](#) to register and download the WebEx outlook file.

Please Note: If you would like to receive this monthly announcement on a regular basis, please register for the conference at the link above, even if you are unable to attend.

**Please post and distribute.
All are welcome.**

Cases to be discussed for Consultants' Conference include:

1. A 38-year-old woman, G1P0000 at 36 weeks and 4 days gestation presents to the ED with abdominal pain after an overdose. Due to a non-reassuring fetal heart tracing, a stat Cesarean section is performed. The neonate has a birth weight of 1880g and has APGAR scores of 2/7; bag-valve mask ventilation is administered for hypoxia and the baby is admitted to the NICU. The Poison Center is called regarding neonatal lethargy in the context of the mother's overdose. Vital signs of the baby at this time are: BP, 66/33 mm Hg; HR, 131 beats/minute; RR, 29 breaths/minute; T, 36.5 Celsius; O₂ Sat, 95% (NIPPV with FiO₂ 0.21).
2. A 53-year-old woman with a history of recent kidney transplant two weeks prior to presentation presents to the ED complaining of shortness of breath. Her initial vital signs are: BP, 120/60 mm Hg; HR, 89 beats/minute; RR, 18 breaths/minute; T, 98.1degrees F; O₂ Sat 90% (nasal canula at 4l/min)). There is no reported overdose.
3. A 48-year-old man with no significant past medical history presents to the ED with priapism for 29 hours after injecting a medication he purchased on the internet for the purpose of sexual enhancement. His vital signs are: BP, 141/85 mmHg; HR, 124 beats/minute; RR, 20; T, 98.2 degrees Fahrenheit; O₂ Sat, 97% (RA).

Mark K. Su, MD, MPH
Director, New York City Poison Control Center
